

## **Video Transcript – Getting the Idea of University**

### **1st Student**

It's a really big transition to come to uni whether you're coming from high school or from somewhere else, uni is very different and I think you need to give yourself time to get used to the university and what it's like.

### **2nd Student**

One of the things that I found very difficult about first year was juggling work, study and social.

### **3rd Student**

I came from the school environment obviously, where we were all about the same age and mostly were from similar backgrounds and similar lifestyles. And I came to uni where that wasn't really the case there where so many different people, some straight from school, some with a lot of life experience, there were people from different backgrounds and I found that to be a really enriching experience. I learnt a lot just informally from the people I mixed with. It was really valuable and sort of helped to make the experience a lot more positive.
