

# Urban Research Program

## 2009 Seminar Series

### Sanne Vammen Larsen

#### Climate change and strategic environmental assessment – Danish experiences

The issues of climate change and river basin management planning both receive much political attention in Denmark. This has initiated doctoral research into the practical implications of preparing strategic environmental assessments of river basin management plans and dealing with climate change in these assessments. This seminar examines preliminary results of research addressing drivers, barriers and challenges to integrating climate change in river basin management and experiences with climate change in strategic environmental assessment.

Sanne Vammen Larsen is a civil engineer in environmental management and a Doctoral Researcher at Department of Development and Planning at Aalborg University, Denmark. Sanne is currently on a 3 month visit at the Urban Research Program as a part of her doctoral research.

**Wednesday 11th November**

12.15 p.m. - 1.30 p.m.

Nathan campus - Building N55, Room 1.12
