**Student comments about placement:**

Made me more aware of how crucial the role of the pharmacist is, and how it can impact on society.

I really enjoyed my placement - staff were friendly and helpful and I felt I managed to be exposed to a range of situations.

Small but busy pharmacy where intimate nature of business meant that I gained valuable experience in a wide range of duties and procedures. I was constantly challenged and out of my comfort zone which was a valuable and positive experience. All staff made me feel welcome and made every effort to support me while on placement.
This was an opportunity to broaden my experiences in pharmacy. Placement allowed me to compound extemporaneous products, dispense scripts and broaden my understanding of the paperwork behind medicine supplies.

Exceeded my expectations as I was allowed to be involved with many decision making processes.

This is a very good learning experience to put theory into practice - there is much more to being a pharmacist than I previously thought. This is a business as well as knowing about health/beauty/baby products.

I am more excited about becoming a pharmacist - full of challenges, responsibilities and diversity. This has motivated me a lot. Placement has given me a better perspective about the community pharmacy industry as a whole.
