

FROM SECOND HOME TO TOURISM ENCLAVE COMMUNITY: A MULTISCALE HETEROGENEOUS SPATIAL ANALYSIS

YI YANG

Due to the globalization of mobility, peer to peer(P2P) sharing platforms make it possible for everyone to participate in the tourism accommodation supply chain. Many existing studies have investigated the socio-economic impact of P2P rental at regional and local scales. However, the impacts of these P2P accommodations are not limited to locals as they are embedded in broader transnational networks. The purpose of this project is to understand the process and characteristics of transnational rental networks. The enclave characteristics of these P2P rental will be identified, including tourism leakages, power structure (distribution of capabilities and patterns of interaction) and the social segregation of communities.
