Speaker: My name is Natasha Sutherland and I'm doing a Bachelor of Secondary Education majoring in Math and Physics. I chose to major in Math and Physics because I've always been quite mathematically minded. So I've always grasped those concepts a lot easier than I have with literacy. My experiences with the lecturers so far is that they have a huge amount of respect for the students. They will take time out of what they're doing to teach you individually. Once I've graduated, I would love to go to Africa and do some volunteering work over there then come back and hopefully teach rurally inland.
