

# How to...

## Download Turbo.net on Windows

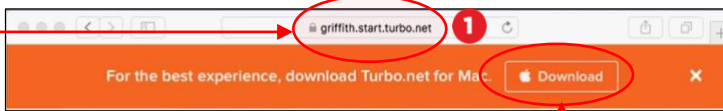

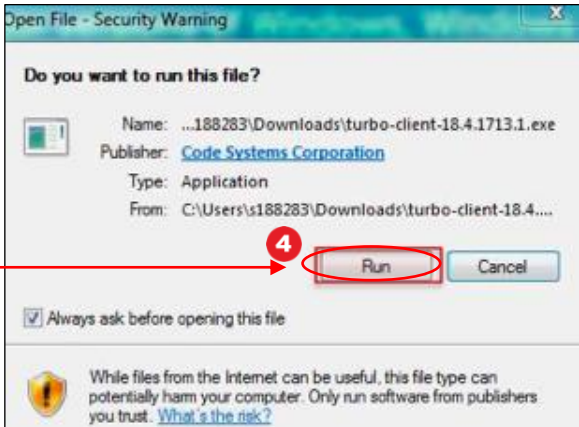

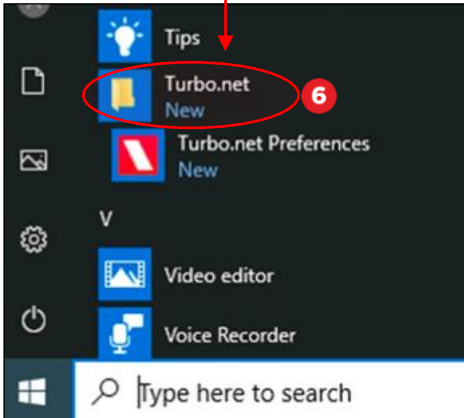

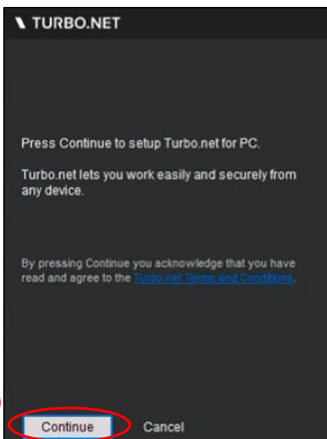

### Introduction

This guide will show you how to download and install the Turbo.net application on Windows devices. Turbo.net allows you to access your course software from your personal device. Please note that some application interfaces will differ to what is shown in this guide.

Please note that to launch applications in **Local and Windowed mode**, the Turbo.net desktop app must be installed on your Windows device. HTML5 mode does not require the desktop app.

### Step 1: Download and install Turbo.net

- 1 Login at <https://griffith.start.turbo.net>.
- 2 Select the **Download** button at the top of the portal.
- 3 Once the download completes, go to your **Downloads** folder and double-click the **Turbo-client.exe** file.
- 4 The **Open File – Security Warning** prompt will appear. Select **Run**.
- 5 The **Turbo.net** installation page will appear. Select **Continue**.
- 6 If **Turbo.net** has installed properly, you will see it in the start menu.

## Step 2: Launch the application

- 1 Go back to [Griffith.start.turbo.net](https://griffith.start.turbo.net).
- 2 Right click on the application you wish to launch. Select with **Windowed** or **Local** modes.
- 3 To connect your Turbo.net account to OneDrive for accessing and saving files when running these applications, you will need to follow the instructions located [here](#).
